

Zone sampler Spiralus

for coarse-grained bulk goods, seeds and pellets

SampleSafe seal

Secure your samples with identifiable seals

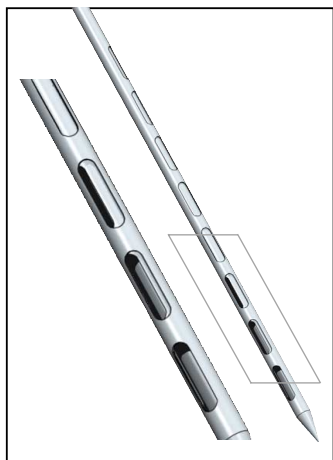

Zone sampler Spiralus

The Spiralus zone sampler ensures accurate zone sampling from all layers of the bulk goods. The spiral arrangement of the sampling slits means that these are opened one after the other from bottom to top. In this way the lowest opening is filled first and then those above it in sequence until the complete Spiralus has been filled. The shape of the sampling slits prevents seeds from being cut up, which means that the original broken seed fraction is not increased. Spiralus ensures an excellent all-layer sample.

- Made of anodized aluminum
- Simple cleaning
- 38 mm diameter
- Available in 2 lengths
- Low weight

Applications

Spiralus is particularly suitable for sampling coarse-grained bulk goods, seeds and pellets at locations such as soil heaps, warehouses, trucks, freight cars, etc.

Secure your retention samples

Retention samples must be protected against adulteration and clearly identified.

Bottles with sealing eyelets

Retention samples should therefore be sealed with SampleSafe seals.

The seals are made from tear-resistant plastic and are provided with an additional marking field. The 7-digit serial number identifies the seals unambiguously.

The seal thread diameter is 2 mm so that SampleSafe seals can also be used with small eyelets and slits.

When the seal thread is passed through the opening in the seal a stainless steel safety spring protects it against manipulation.

- Unambiguous identification by embossed 7-digit number.
- 10 seals per strip, numbered in sequence.
- 100 seals (10 strips) per pack/box.
- Thread 2 mm dia., suitable for small eyelets and slits.
- Protection against manipulation by stainless steel safety spring.
- Standard color is red, other colors on request.

Bottles which can be sealed are shown on pages 123, 133, 134 and 150
