

PharmaSpoon

for ultrapure sampling of active ingredients

PharmaSpoon

Special materials with excellent surface qualities must be used for sampling powdery substances, intermediate products and raw materials in the pharmaceuticals industry to prevent cross-contamination.

Our PharmaSpoon fulfills these requirements completely. Made of stainless steel 316, surface polished to a high gloss by hand (not electropolished!). The excellent surface qualities of the PharmaSpoon provides four decisive advantages:

- Residue collection is made much more difficult
- Residues are even visible in the trace sector (μg sector)
- The surface is easy to clean (no use of strong acids or caustic solutions necessary)
- The PharmaSpoon is also suitable for sterile sampling

The PharmaSpoon was developed by an internationally known pharmaceutical company in Basel, Switzerland, and its usefulness has been confirmed in actual practice.

PharmaSpoon

Capacity ml	Diameter mm	Price/unit	Article No.
500	595	266,00	5324-1 N2

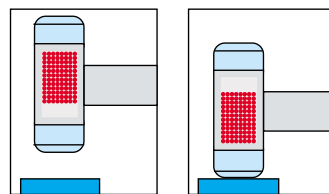

Superpower sledgehammer

Superpower sledgehammer

with transmission of the complete impact force using steel scraps. Hammering in drill rods becomes child's play with these hammers.

- Rebound-proof
- Exchangeable inserts, made of white, hard nylon

Superpower sledgehammer

with steel scraps
